Background

01

Project Brief

By the latter half of this course, we have learned the basics of coding and website development. For this project the goal was to bring a short story to life, while considering the flow of content, visual design, expressive web typography, animated and interactive enhancements, and overall responsive nature.

We were tasked with designing and development of an experimental single-page website. With an open prompt for the topic, I chose to dive into the global issue of plastic pollution, a topic I am learning in my sustainability class. My goal is to encourage my audience to take action and do what they can to help our environment.

MAY 7TH

JUNE 10TH

Problem

In the topic of our environment, a major issue we face is the pollution of plastics in our food, landfills and oceans. Education on this issue is vital to future solutions and educational websites are few and far between.

400 Million

Tonnes of plastic waste is generated by the world every year.

8 Million

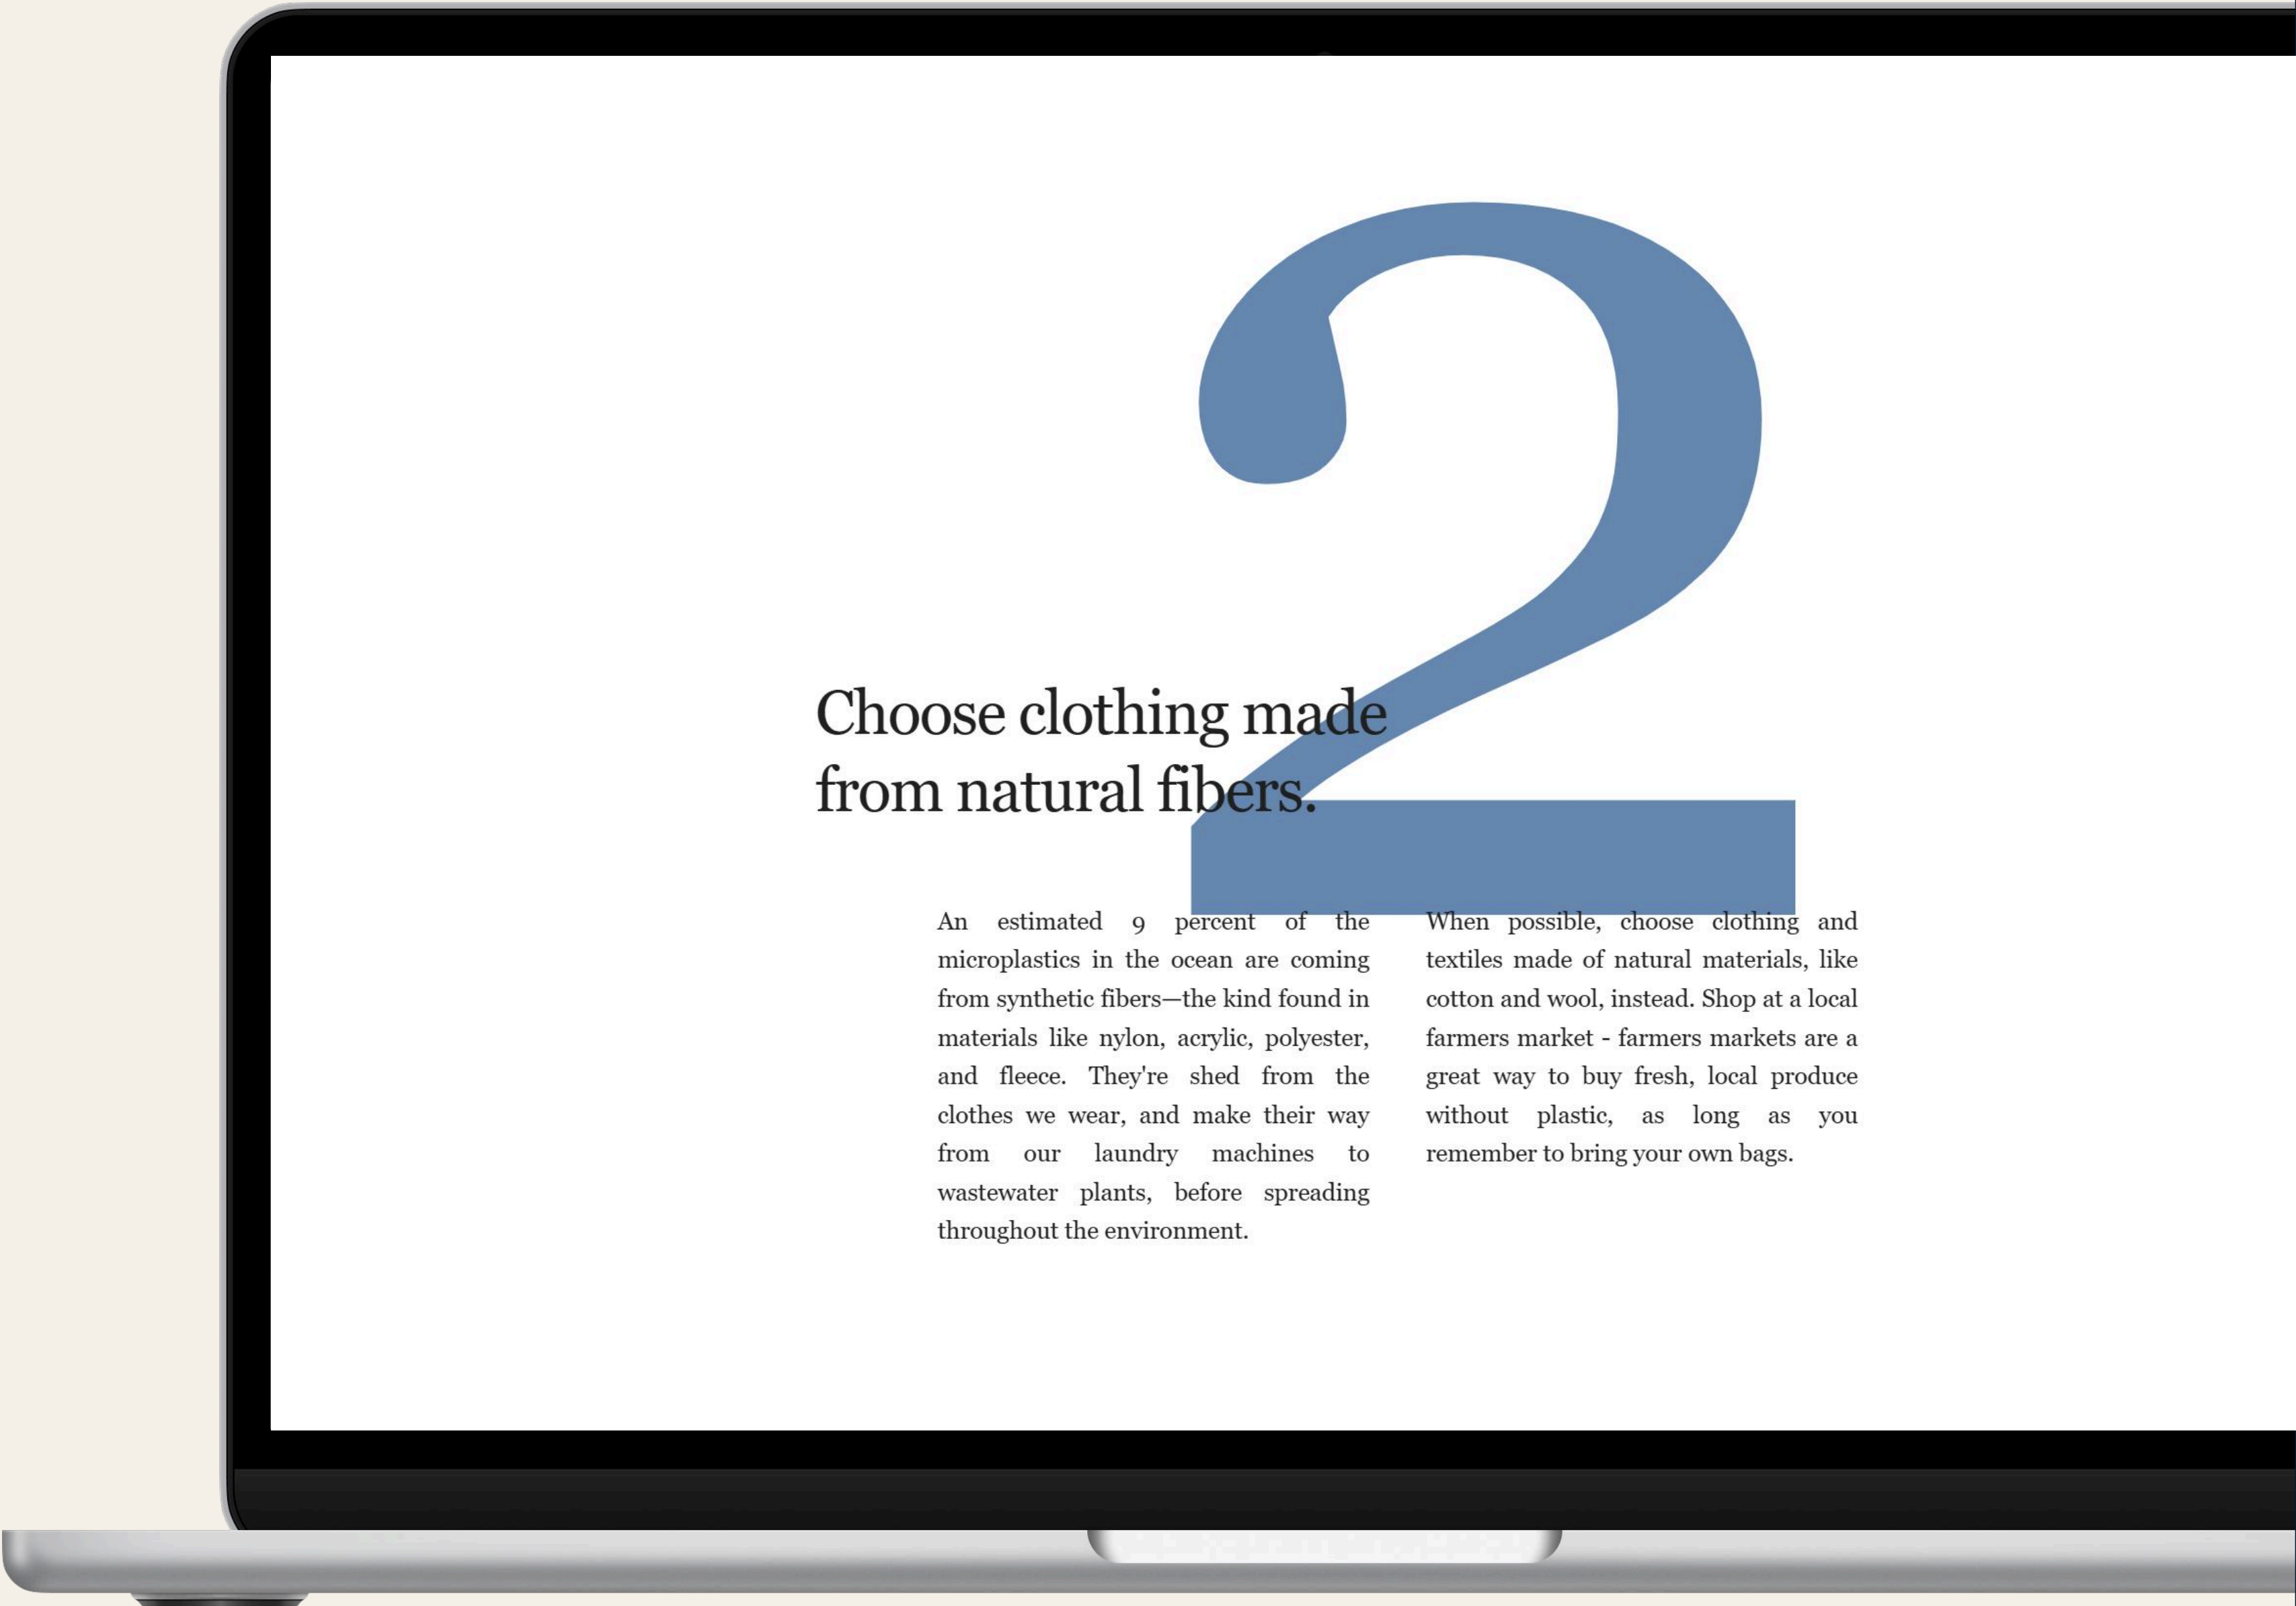

Tonnes of plastic waste enters the oceans every year.

Solution

“THE FACTS & HOW YOU CAN HELP”

The way in which future generations are taught about the environmental issues we face is very important. There is need for an educational website that is informative but also emotionally impactful to spark action from the audience.

With this, I wanted to take a high-contrast, minimalist approach to my website which informs the audiences of hard truths on plastic pollution and teaches sustainable practices of plastic-use, enabling the audience to play their part.

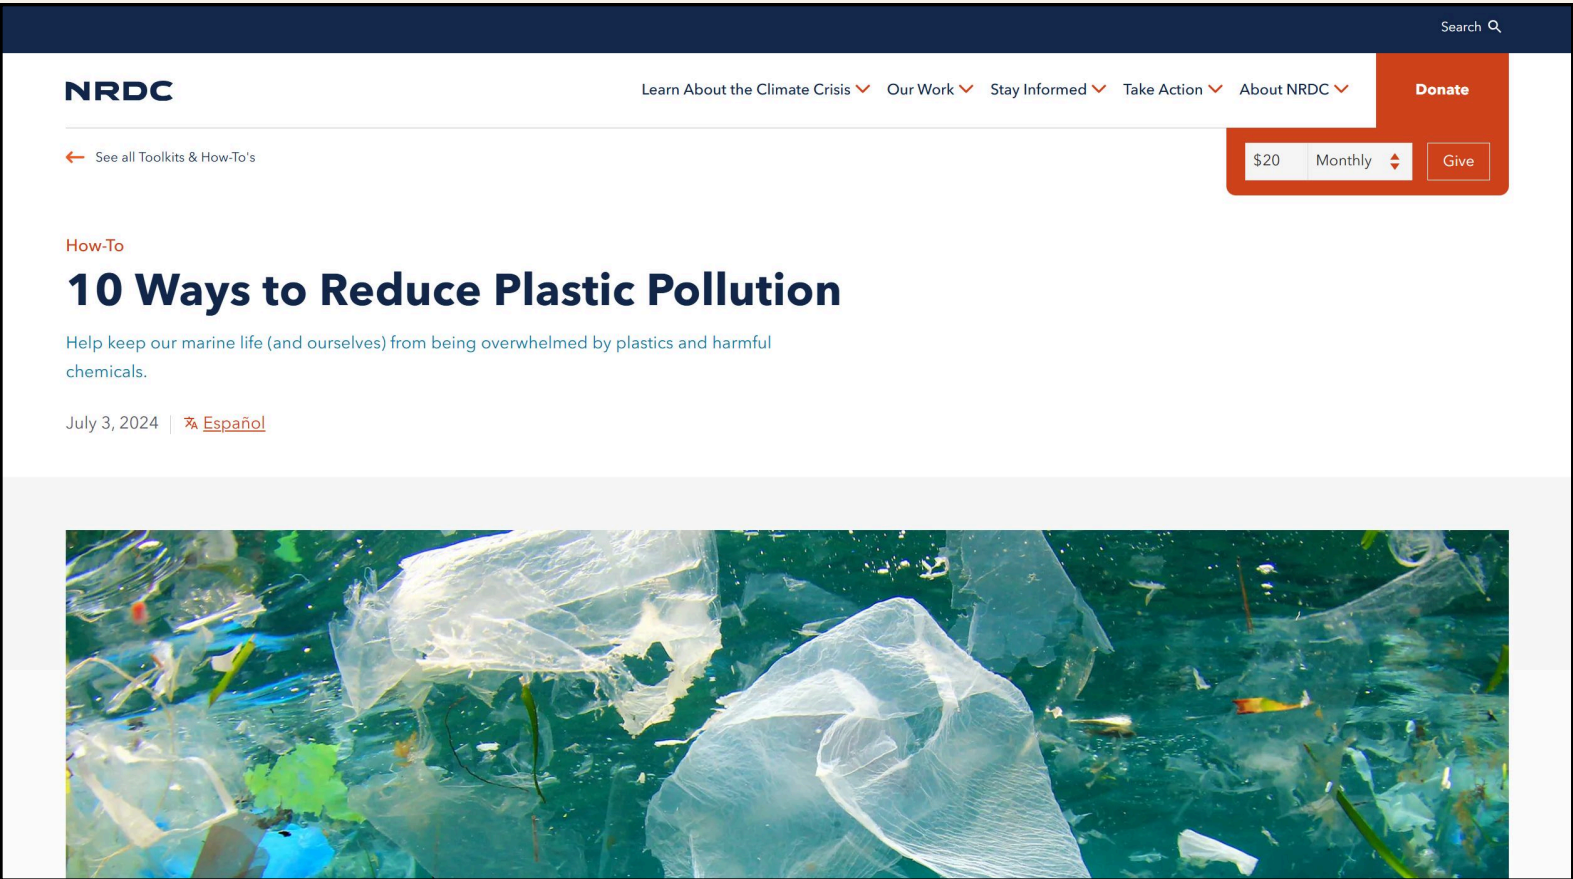

Product Statement

“The Facts & How You Can Help” is a education website designed to inform everyone of the reality of Plastic Pollution and encourage them to do their part through impactful design and trustworthy facts.

Research

02

10 WAYS TO REDUCE PLASTIC POLLUTION

This web-page from The National Resources Defense Council provides a list of 10 way one can reduce their contribution to pollution. Encouragement wise, this is the best list out of these website examples. The options are attainable and backed with simple explanations.

<https://www.nrdc.org/stories/10-ways-reduce-plastic-pollution>

8 SHOCKING STATS TO KNOW ABOUT

Earth.org posted a list of 8 statistics about plastic pollution which is designed to inform the readers about the gravity of the man-made problem. The tone is urgent and makes the audience think, aspects that are good for creating change.

<https://earth.org/plastic-pollution-statistics/>

EIGHT EASY WAYS TO REDUCE YOUR WASTE

Audubon magazine has the better designed web-page out of these examples but it is still not creating a big impact on the audience. Their list of eight easy hacks is catered to the individual and are in phrase very passive options, not quite enough emphasis on the urgency.

<https://www.audubon.org/magazine/eight-easy-ways-reduce-your-plastic-waste>

Chosen Information

THE FACTS

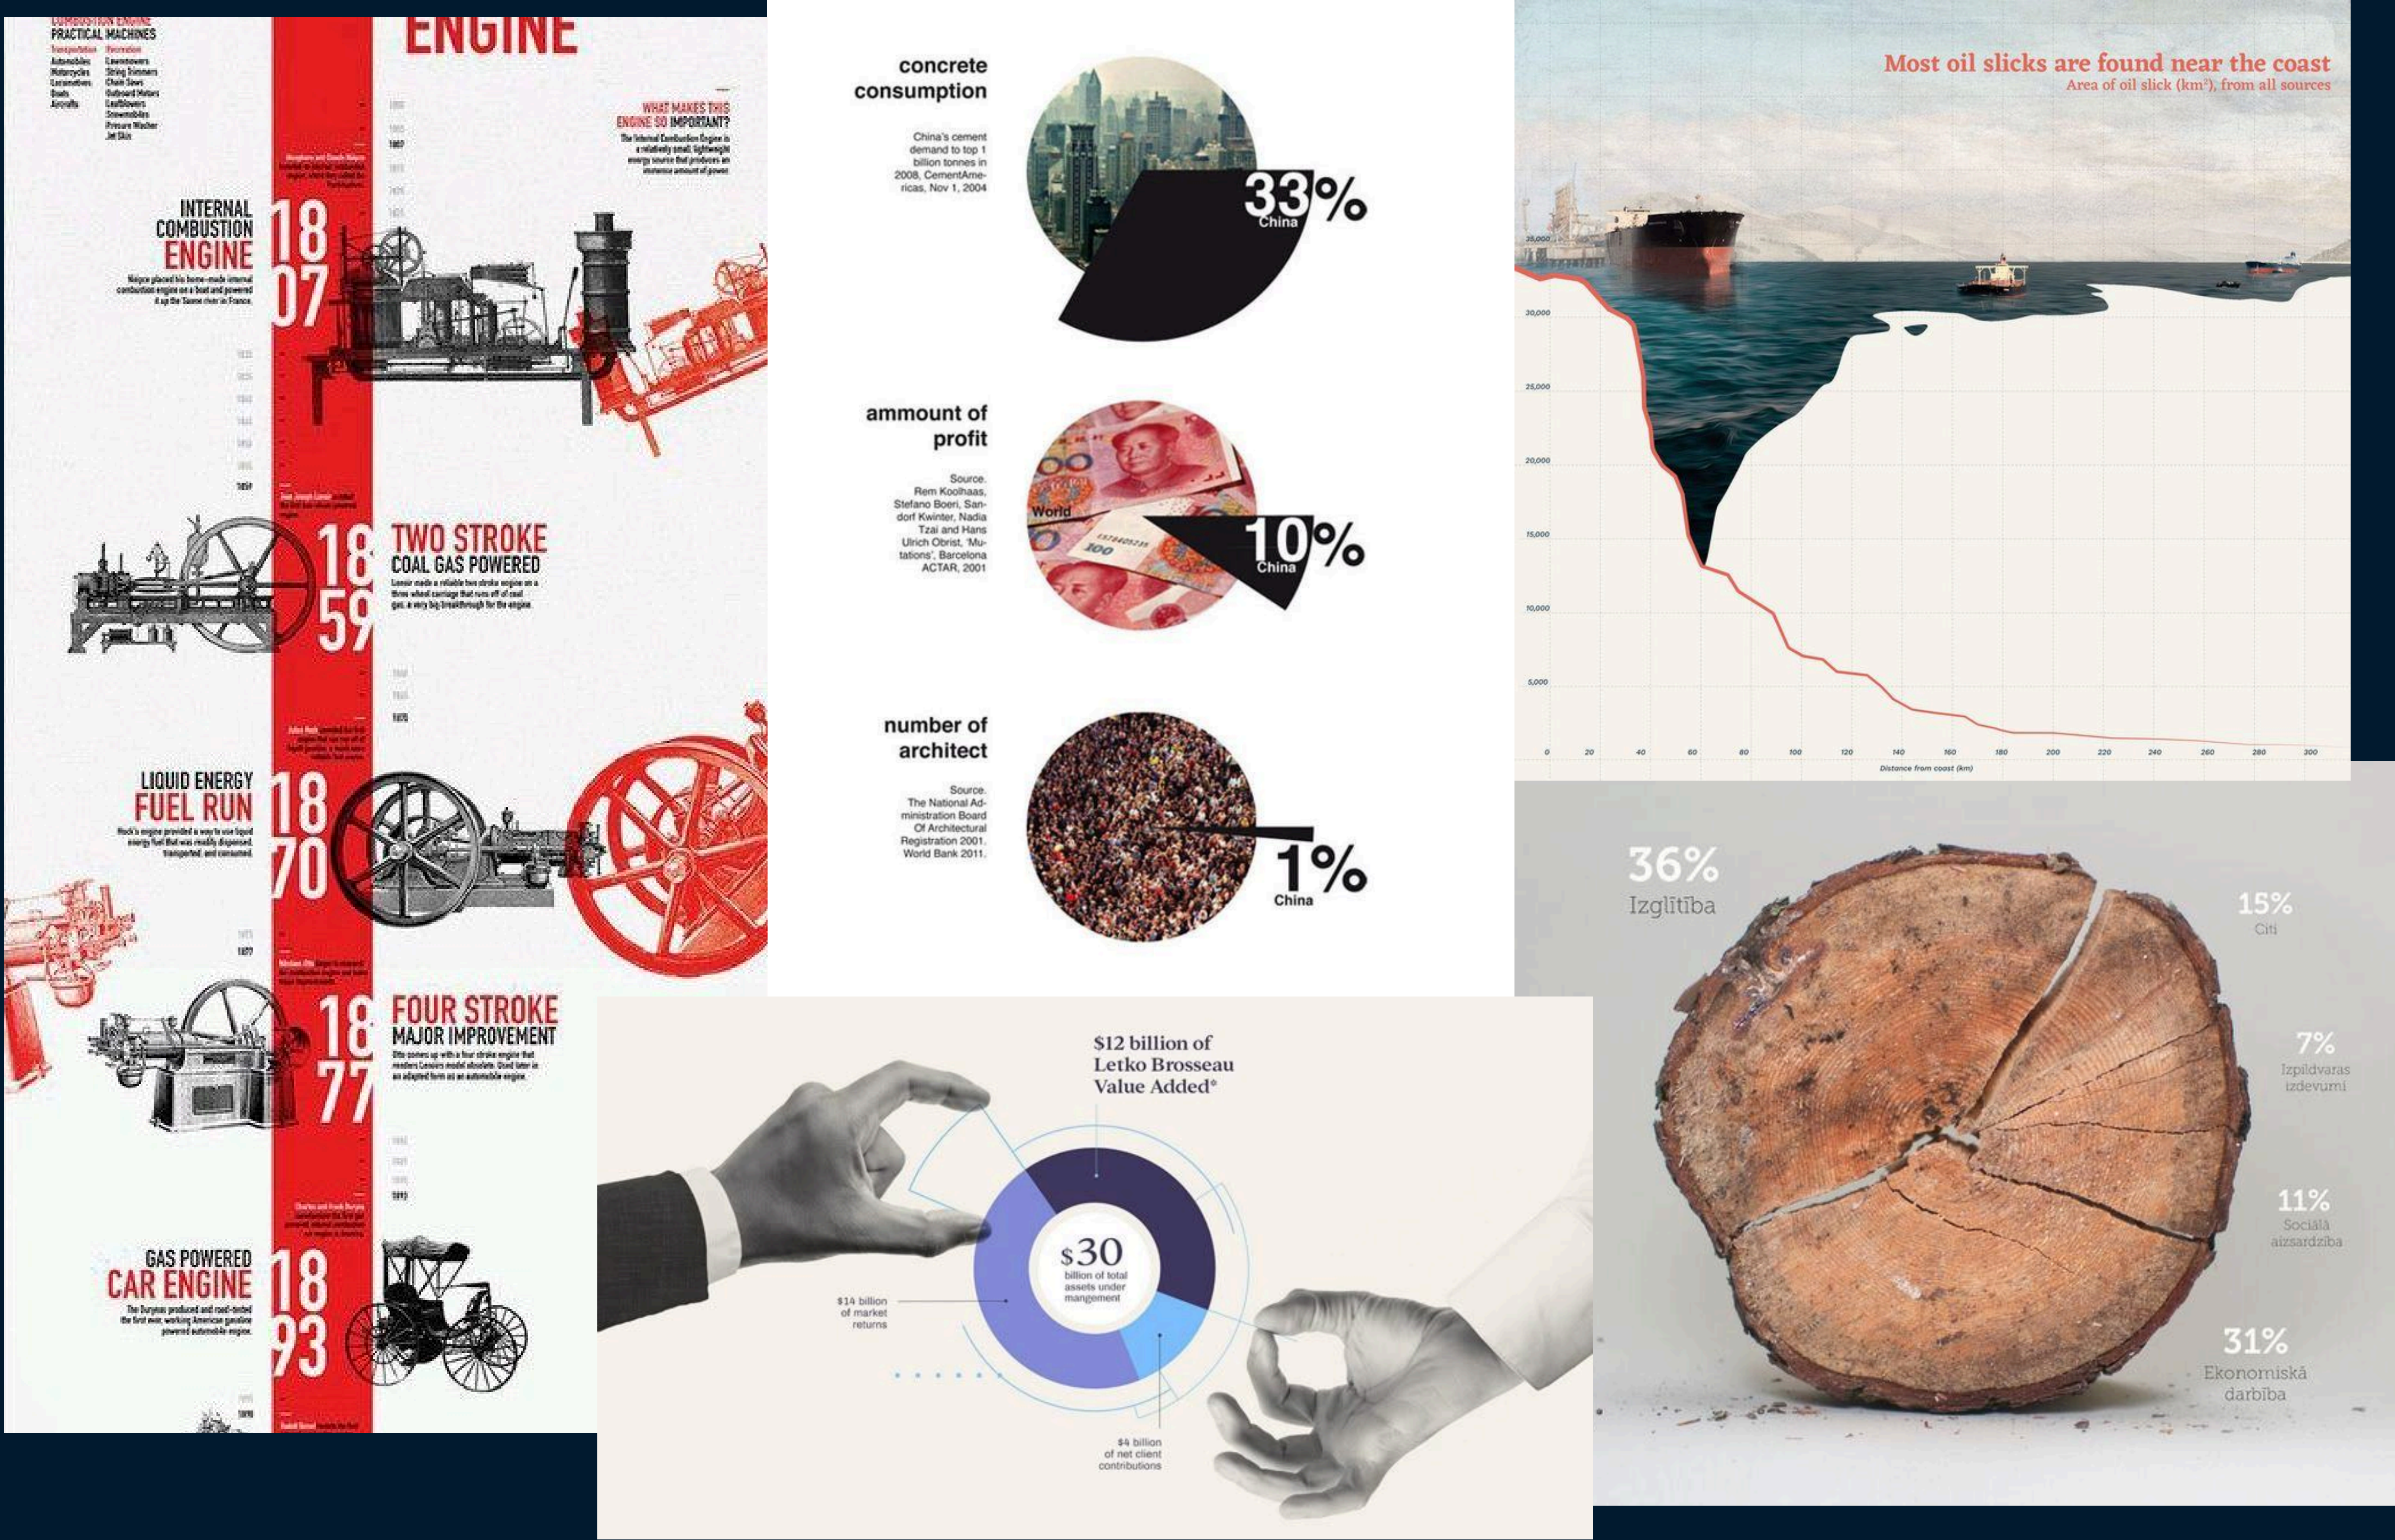

- The world generates over 400 million tonnes of plastic waste a year.
- More than 8 million tonnes of plastic enter the oceans every year.
- 100,000 animals die from plastic entanglement each year.
- Humans ingests 5 grams of plastic every week.

WAYS YOU CAN HELP

- Buy in bulk and look for eco-friendly packaging.
- Choose clothing made from natural fibers.
- No more take-out, cook more.
- Remember Your Reusable Bag.
- Get Better at Recycling

Example web pages and compositions which sparked my inspiration.

Concept Evolution

03

Goals

EMPHASIS

The urgency of this environmental problem needs to be communicated to the audience. I can accomplish this by bringing emphasis to the numbers, and to the facts we are currently faced with.

ENCOURAGEMENT

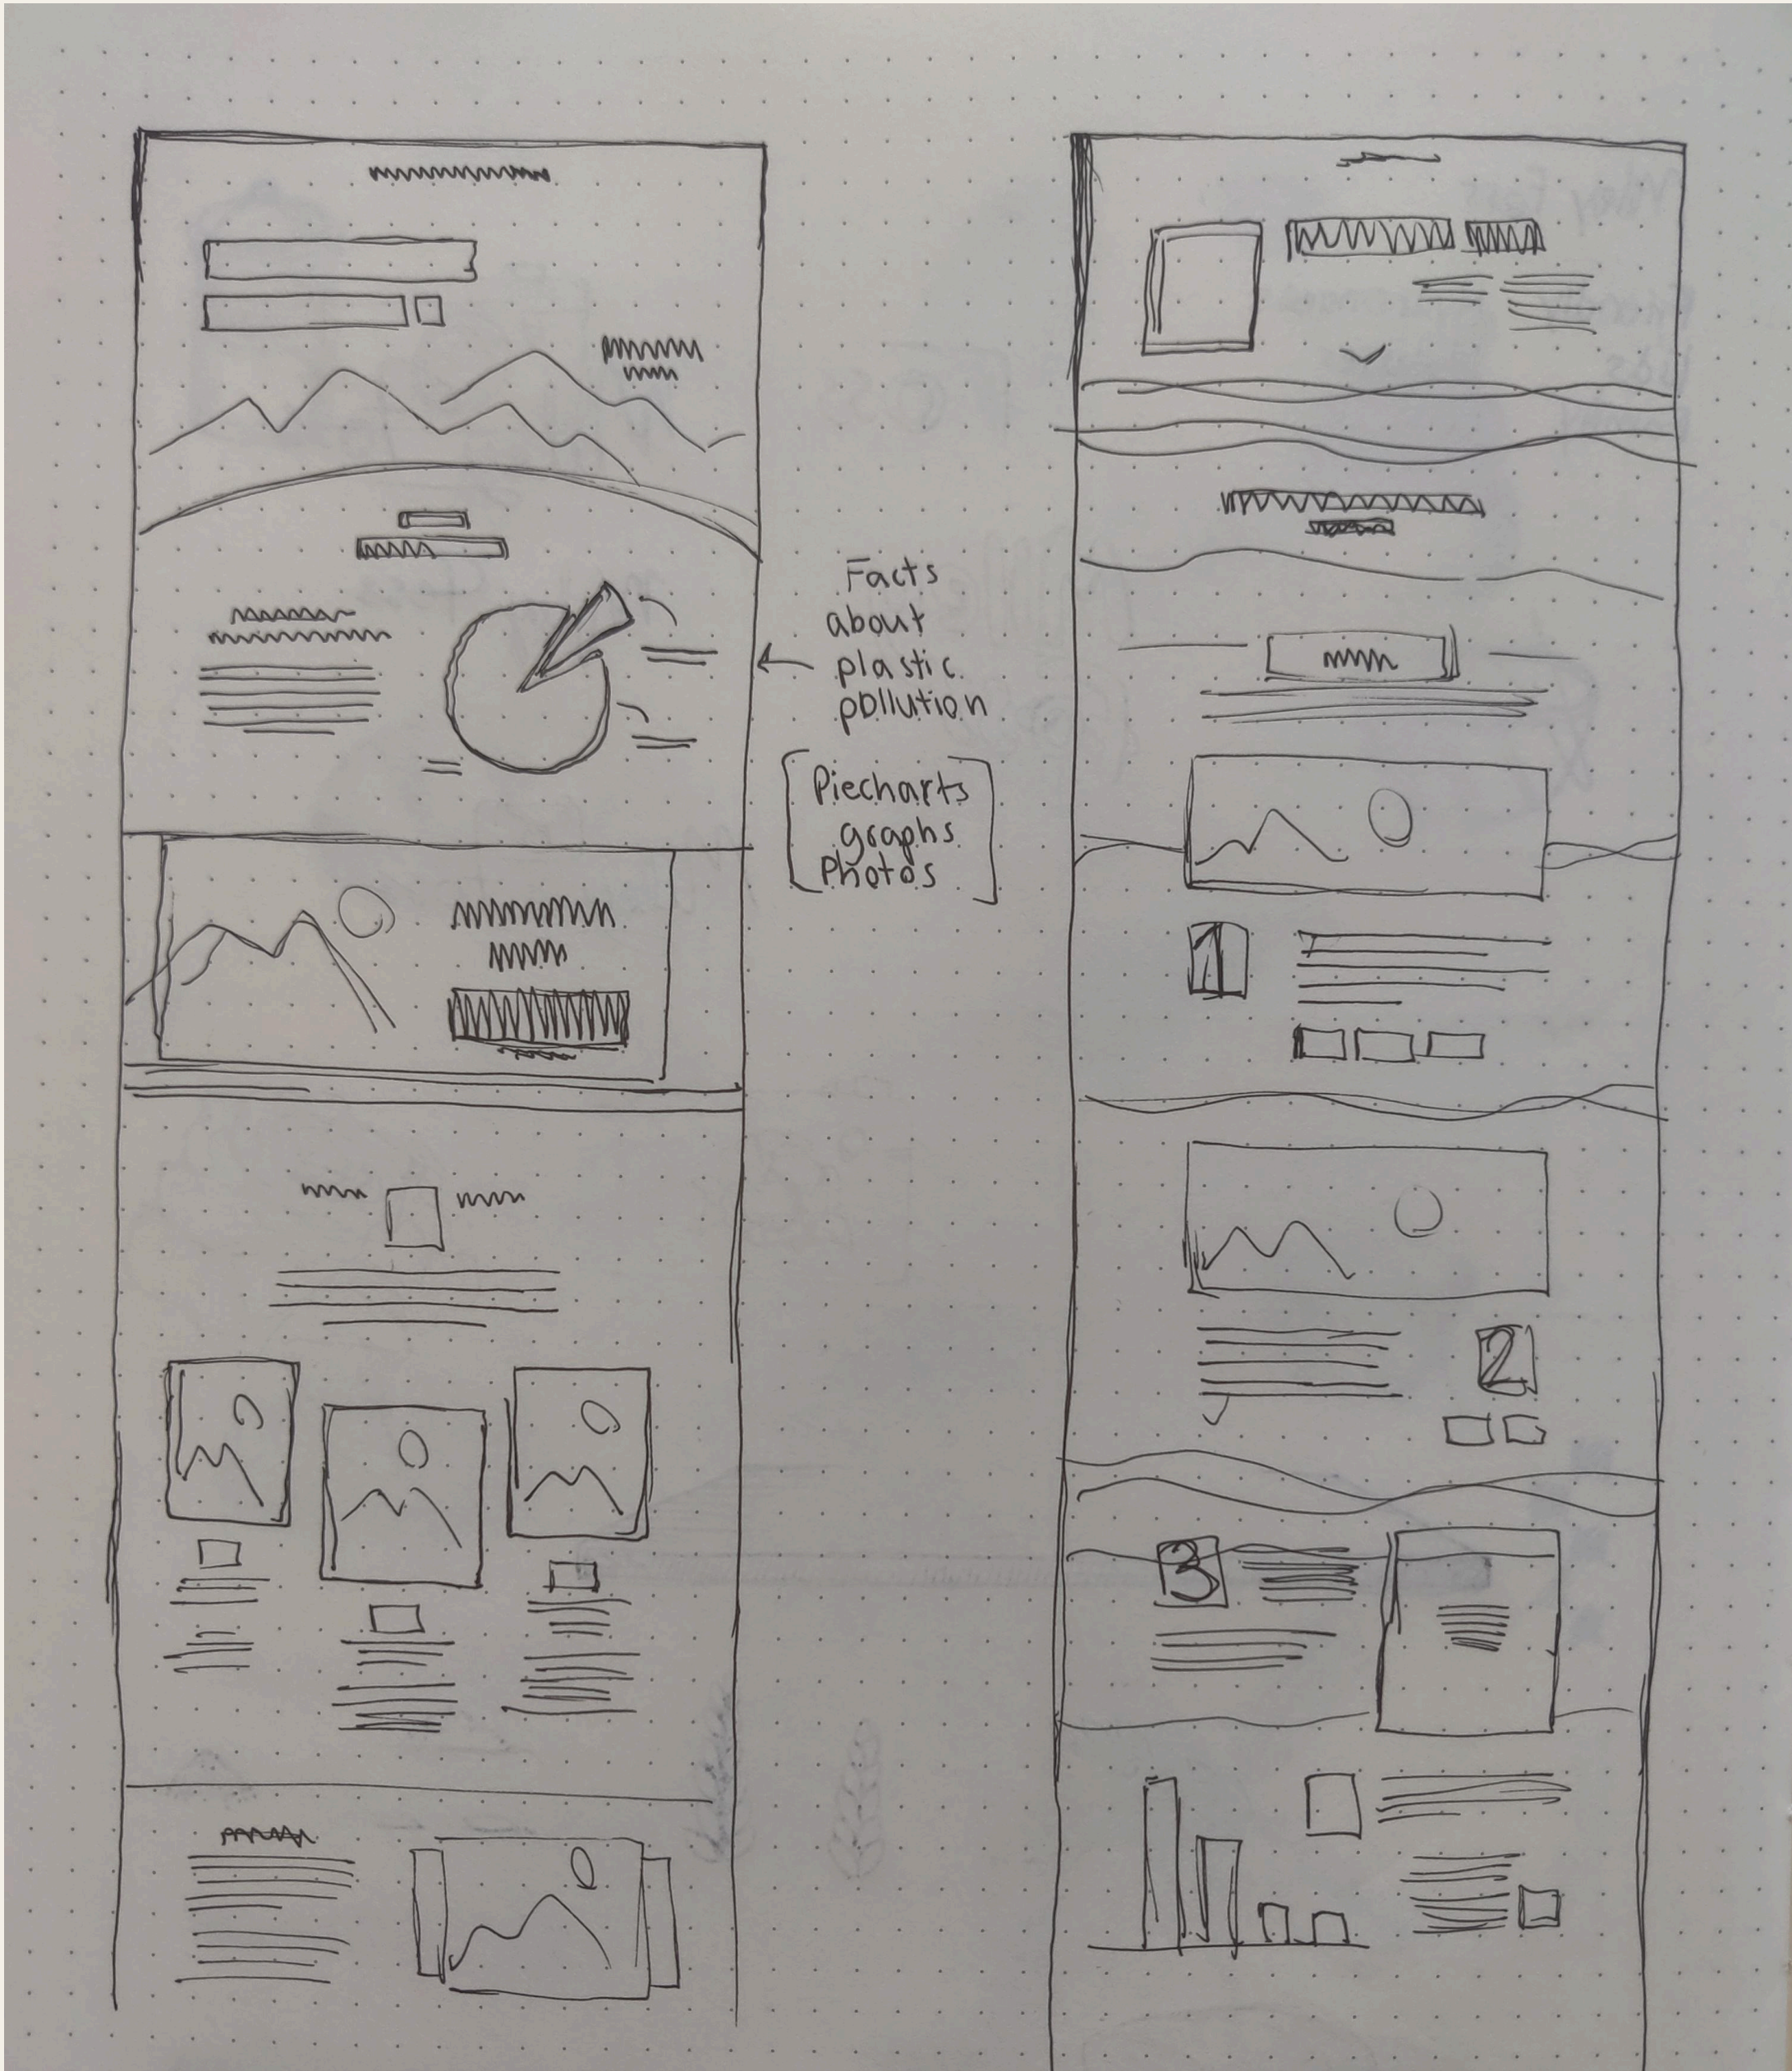

The tone of a website is key to encouraging people to take action. I want to enable people to make good habits when it comes to plastic use, the words should be inspirational, easy, and speak to the reader on a emotional level.

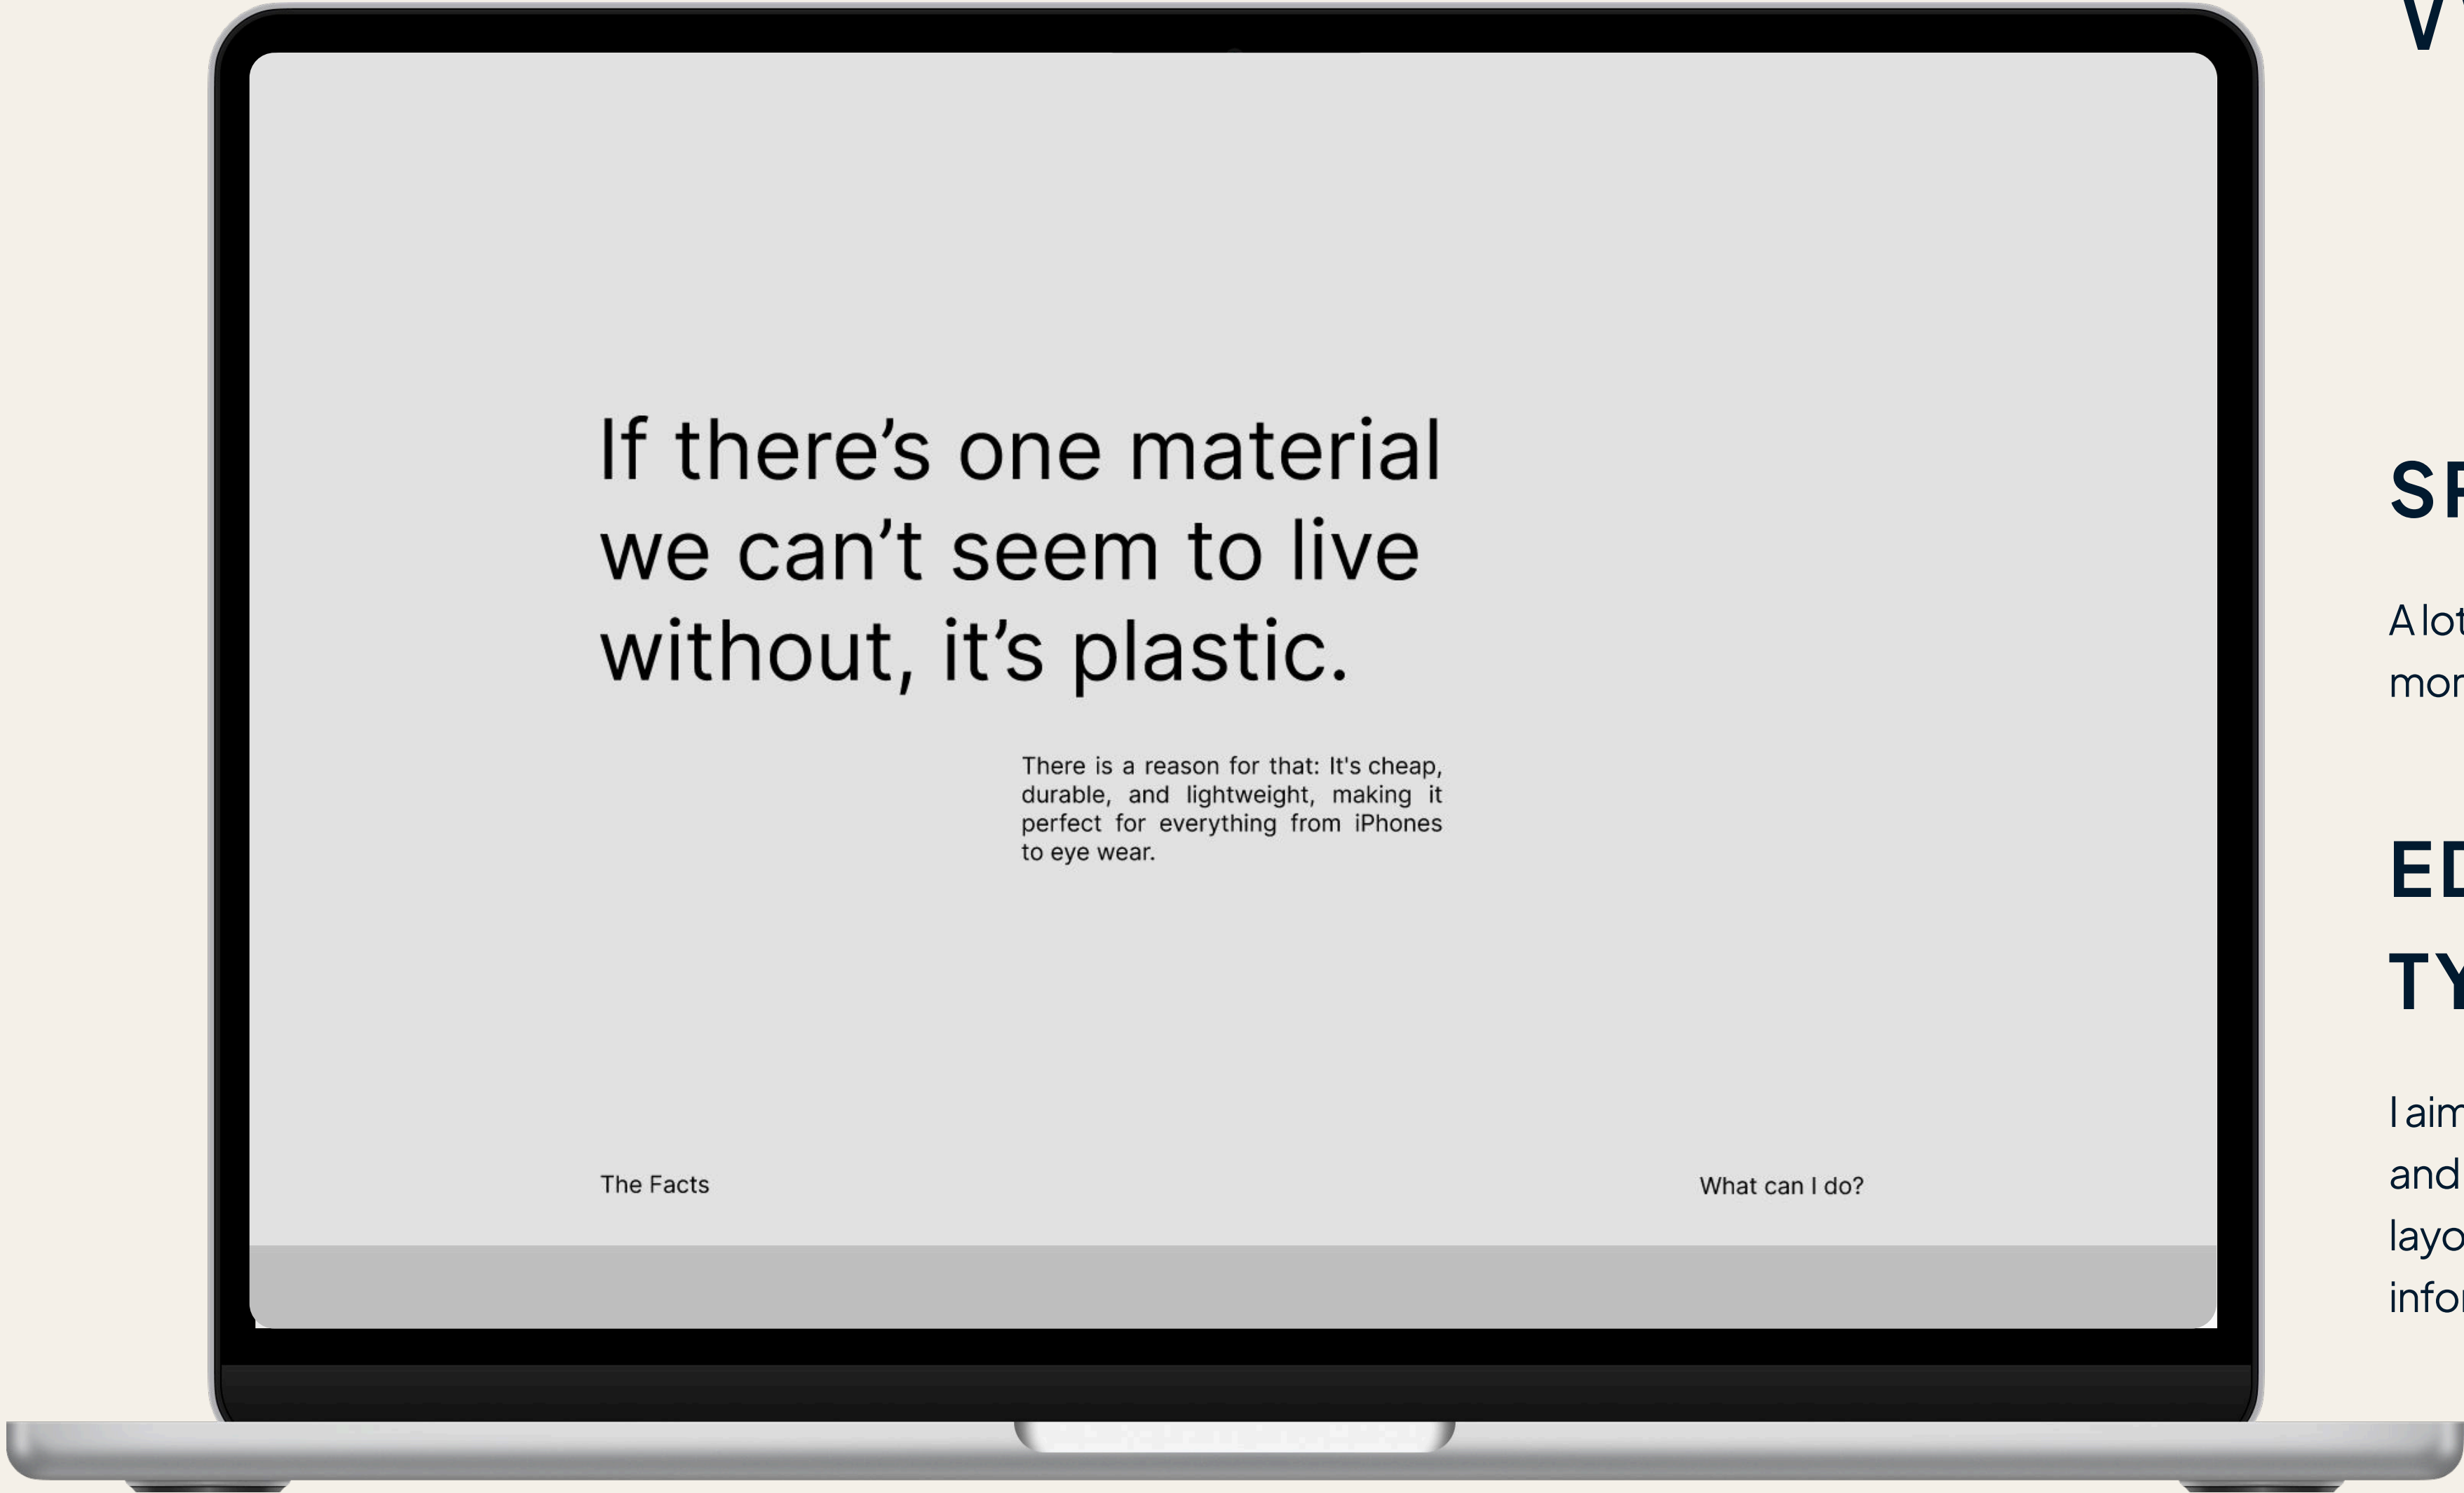

INFORMATION

On the base line, the statistics given should be accurate and trustworthy. There is nothing worse for this cause than allowing misinformation. The way in which people can help should also come from research and be easily attainable.

Sketching

Wire frames

SPACIOUS DESIGN

A lot of negative space will allow people to focus more on the important information.

EDITORIAL TYPOGRAPHY

I aimed to achieve an impact through hierarchy and editorial typography. Interesting typography layout paired with the overall gravity of the information creates the desired educational tone.

Wire frames

EMPHASIS WITH SCALE

There are many facts with numbers that show the gravity of the situation. To bring emphasis to these points, I will use drastic scale and depth to oversell the points discussed.

VISION FOR TRANSITIONS

A big part of my vision for the web page is the use of transitions between chunks of information. The backgrounds will be related images and emphasized type that will slowly transition as the user scrolls through the page, and the important information will scroll normally in the foreground.

User Testing

IMPLEMENT PICTURE

Implement pictures into the backgrounds, it would make the page more interesting and add to the topic of information.

GOOD TYPOGRAPHY

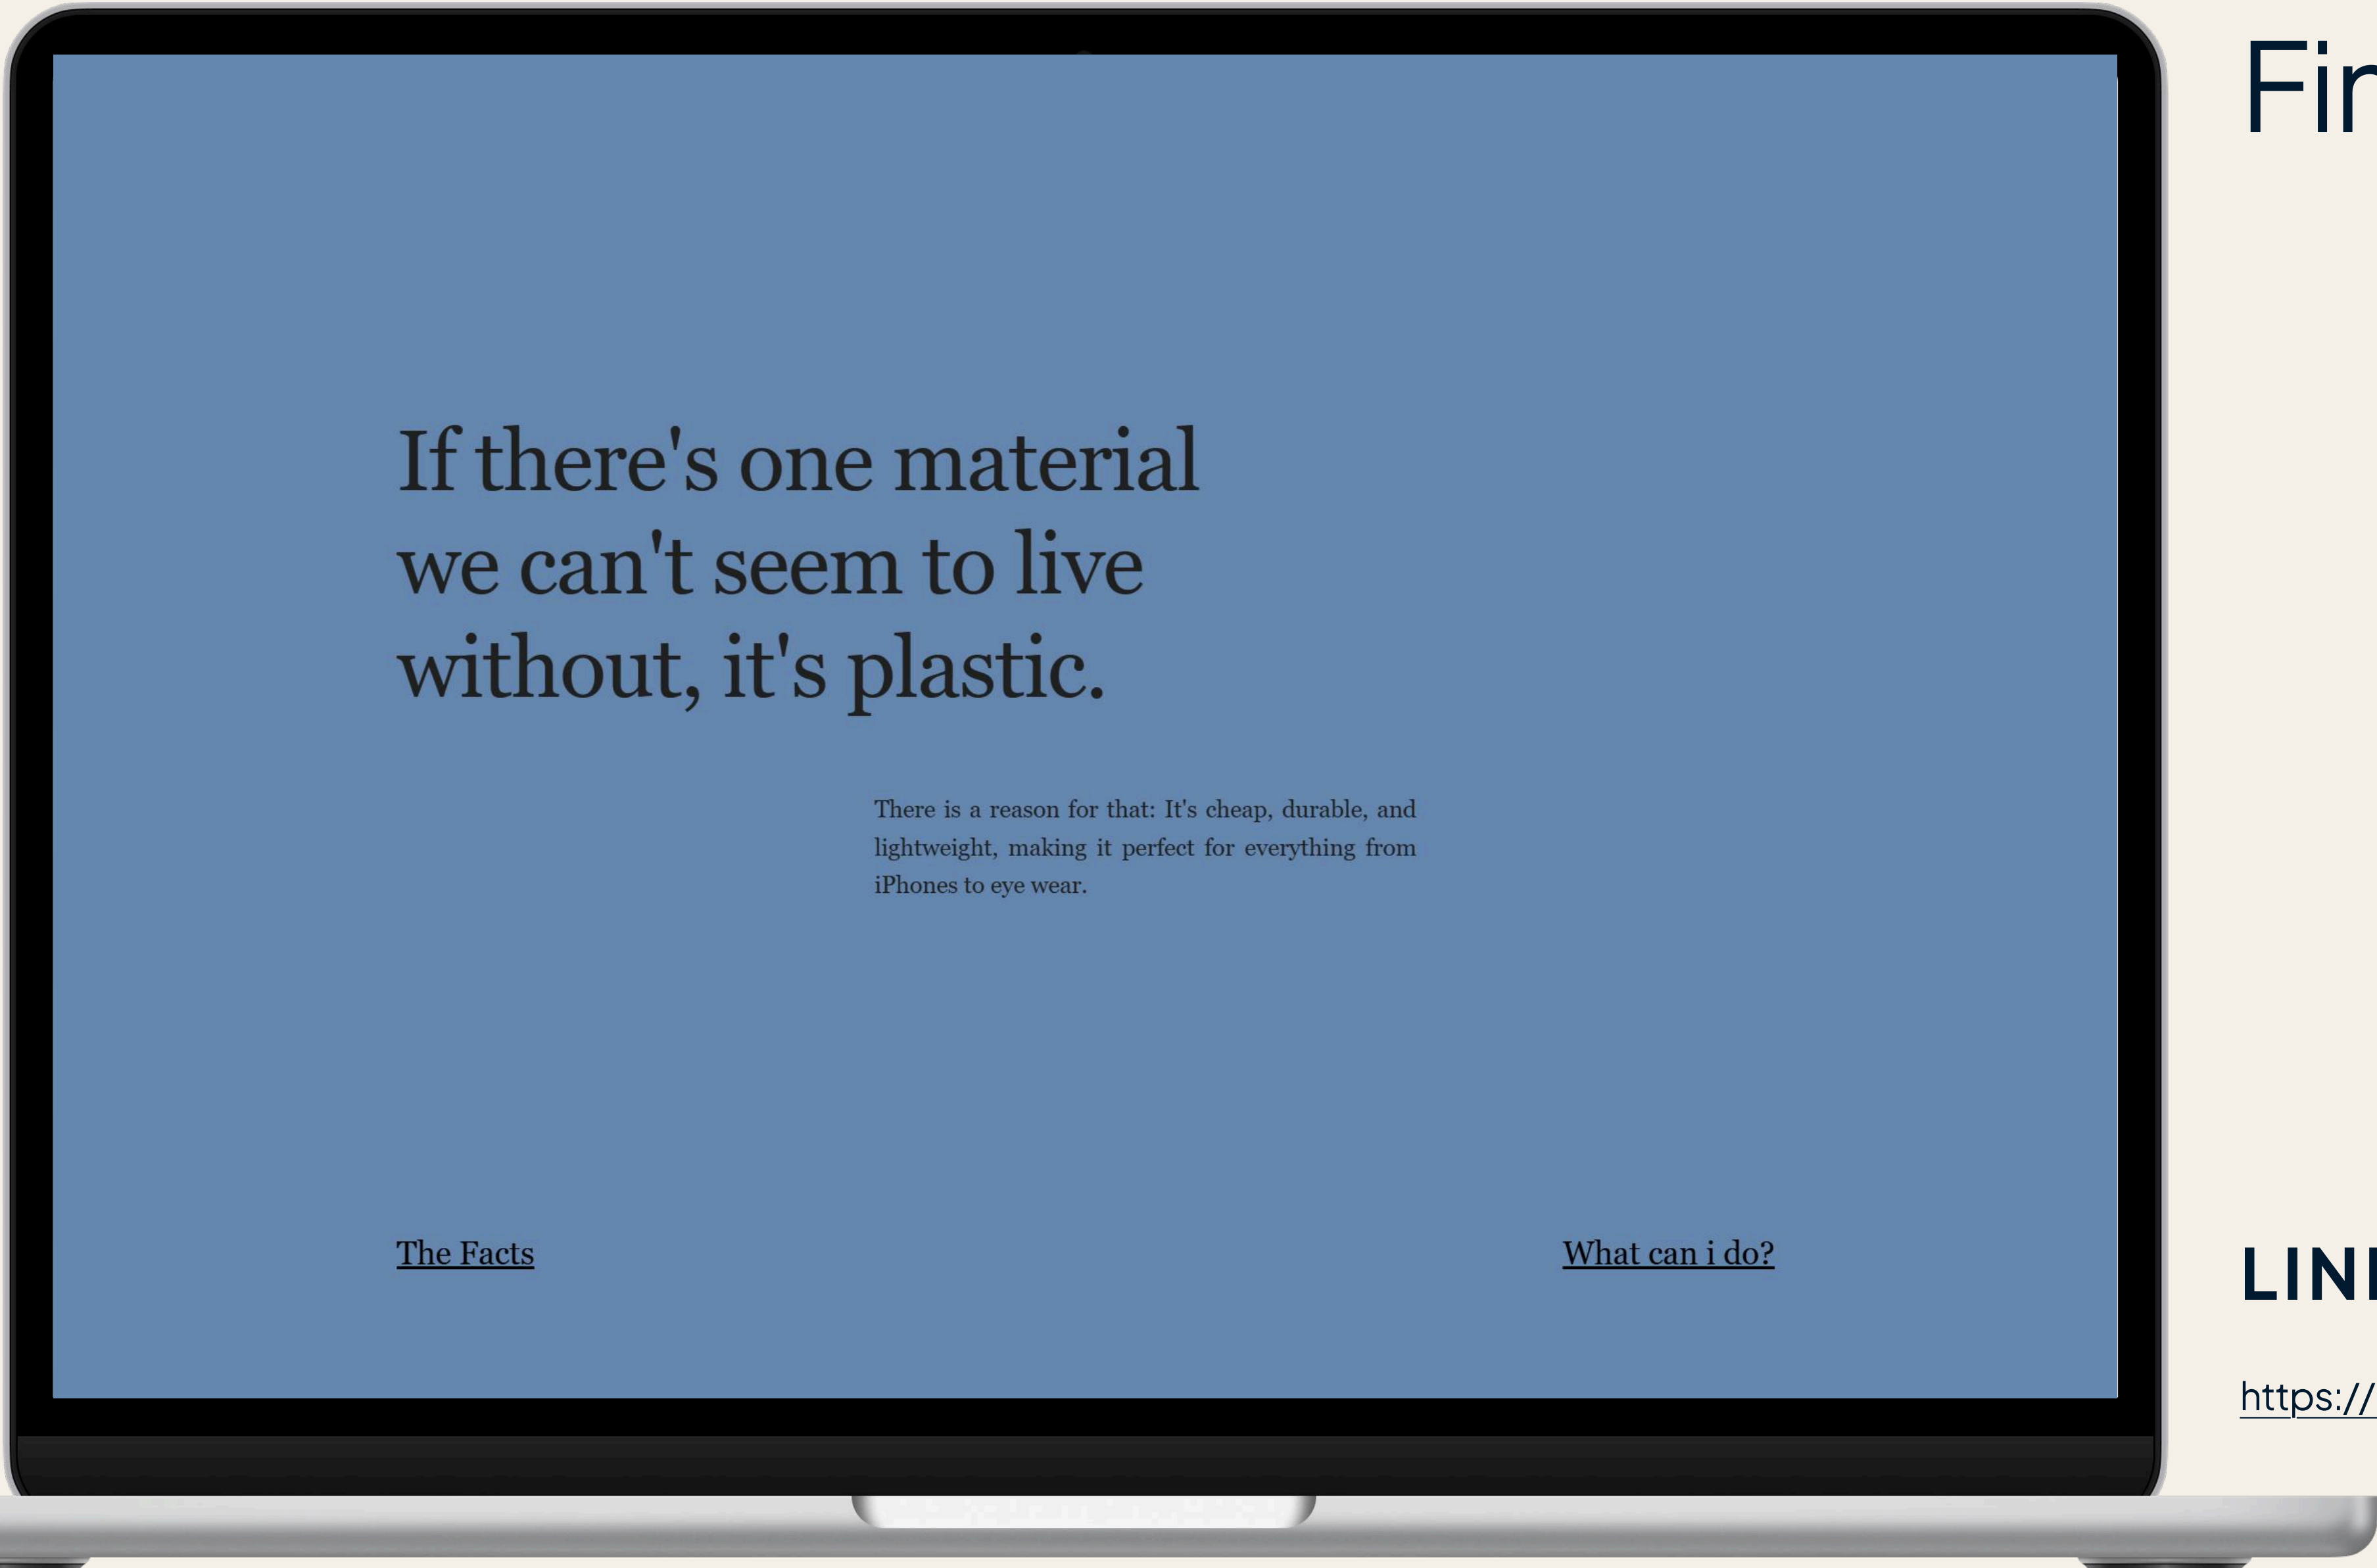

The type hierarchy makes the topic more interesting, but there needs to be some contrast between the sections of type, like adding transitions or interesting backgrounds.

Reflection

Through the process of building this website, I learned that it can be difficult to bring my design vision into reality with code. As a beginner there was a lot that I wanted to accomplish but couldn't; maybe with some more experience. If I could start over, I would focus on the basics of code and how I could push my design with those skills.

Thank you!
